

15 modules need attention across 214 analysed

Deterministic analysis of every formula, dependency, and aggregation pattern. Issues ranked by blast radius — downstream outputs affected.

NAMING: CLIENT-PREFIX FORMULA RISK: HIGH EVIDENCE: QUALIFIED

Critical 33

High 31

Medium 92

Clean 58

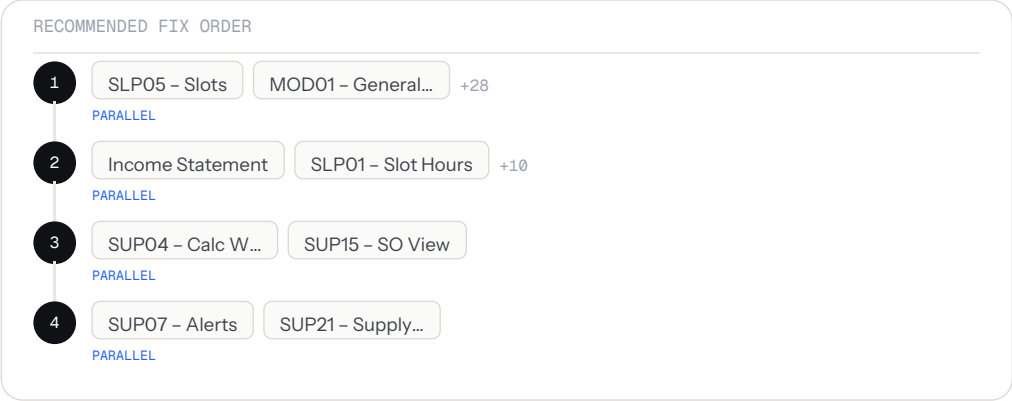

Highest-Risk Modules

8 of 156

MODULE	SEVERITY	ITEMS	RATING
DEM06 – Opportunity Management		92	CRITICAL
SLP05 – Slots		58	CRITICAL
MOD01 – General Settings		48	CRITICAL
DCW03 – Stat Calculations		195	CRITICAL
SUP04 – Calculations Weekly		120	HIGH
Income Statement		45	MEDIUM

Risk Clusters

Rename of 'Actual' in Versions 12 items across 5 modules	CRITICAL
Connected modules with critical findings 340 items across 4 modules	HIGH

BOTTLENECKS

DCW03.History	33 out
DEM06.Product	30 out
MOD01.Current Period	28 out
SLP05.Product	24 out
DEM06.Customer	22 out

Evidence Boundaries

Confirmed - Formula-level dependencies between all line items - Exact blast radius for any change - Hardcoded references that break on rename - Dimensional flow and aggregation patterns	Cannot determine - Actual recalculation performance or memory usage - Whether a finding is intentional - Cell count without Polaris/HyperConnect metadata - User-facing page layout and dashboard config
